DETAILED ACTION

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121.

Group I, claims 3-7, drawn to the apparatus having a refrigeration cycle, classified in class 310, subclass 89.

Group II, claims 8-13, drawn to the induction motor, classified in class 310, subclass 166.

Group III, claims 14-19, drawn to the method of making a motor, classified in class 29, subclass 596.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions of group III and groups I to II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). Regarding claim 8, the product as claimed can be made by another and materially different process such as press-fitting the poles into the shell instead of welding. Regarding claim 3, that the process as claimed can be used to make other and materially different product such as an induction motor with a support structure for the stator (not an apparatus having refrigeration cycle which requires a compressor).

Inventions of group I and group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the

Art Unit: 2834

combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination (group II) does not require "a shell forming a closed space". The subcombination (group I) has separate utility "a compressor located within the shell"

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Attorney of record on 10/27/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
